Teaching guide

IDENTIFICATION DETAILS

Degree: Computer Engineering

Field of Knowledge: Engineering and Architecture

Faculty/School: Senior Polytechnic School

Course: LINEAR ALGEBRA

Type: Basic Training

ECTS credits: 6

Year: 1

Code: 3613

Teaching period: First semester

Area: Mathematics

Module: Basic Training

Teaching type: Classroom-based

Language: Spanish

Total number of student study hours: 150

SUBJECT DESCRIPTION

The Linear Algebra course is intended to familiarise students with major theoretical and practical foundations of computer science-related mathematics. Some of their applications include the study of data structures, computer security, communication codes and the compression of information. This subject helps students to develop an ability for mathematical reasoning and to enhance their capacities for abstraction and specificity, which are essential pillars of training in engineering and the exercise of the engineering profession.

SKILLS

Basic Skills
Students must have demonstrated knowledge and understanding in an area of study that is founded on general secondary education. Moreover, the area of study is typically at a level that includes certain aspects implying knowledge at the forefront of its field of study, albeit supported by advanced textbooks.

Students must be able to apply their knowledge to their work or vocation in a professional manner and possess skills that can typically be demonstrated by coming up with and sustaining arguments and solving problems within their field of study.

Students must have the ability to gather and interpret relevant data (usually within their field of study) in order to make judgments that include reflections on pertinent social, scientific or ethical issues.

Students must be able to convey information, ideas, problems and solutions to both an expert and non-expert audience.

Students must have developed the learning skills needed to undertake further study with a high degree of independence.

**General Skills**

Knowledge for preparing measurements, calculations, valuations, appraisals, inspections, studies, reports, task planning and other similar computing work.

An ability to design, develop, assess and guarantee the accessibility, ergonomics, usability and security of computer applications, services and systems, and the information managed therein.

Knowledge of the basic materials and technologies, giving rise to learning and the developing of new methods and technologies, and which also provide huge versatility to adapt to new contexts.

An ability to solve problems with initiative, with effective decision-making, independence and creativity. Capacity for being able to communicate and convey knowledge and skills of the technical computer engineering profession.

**Specific skills**

An ability to solve mathematical problems that arise in engineering. An ability to apply knowledge of: linear algebra, differential and integral calculus, numerical methods, numerical algorithms, statistics and optimisation.

**DISTRIBUTION OF WORK TIME**
